CS-2334 FUNDAMENTALS OF DATA SCIENCE ABENANTHAN P 240701005

Experiment 8 Date: 18.09.2025

Experiment to understand Logistic Regression for a given data set.

Aim:

To conduct an experiment to understand Logistic Regression for a given dataset

Description:

Understand Logistic Regression algorithm for a given dataset

Algorithm:

- Step 1: Define the Classification Problem and Select Features
- Step 2: Split the Dataset into Training and Testing Sets
- Step 3: Train the Logistic Regression Model
- Step 4: Predict and Evaluate Model Performance
- Step 5: Interpret Coefficients and Visualize Results

About Dataset:

This dataset represents user information with attributes including User ID, Gender, Age, Estimated Salary, and a binary Purchased indicator showing whether the user made a purchase (1) or not (0).

Code With Output:

```
import numpy as np
import pandas as pd
df=pd.read_csv(r'D:\REC 2nd Year\Data Science\Data Sets\
Social Network Ads.csv')
df
