9. Experiment to understand KNN algorithm for a given dataset

Experiment 9

Date: 25.09.2025

Aim:

To conduct experiment to understand KNN algorithm for a given dataset

Description:

Understand the KNN algorithm for the dataset given.

Algorithm:

Step 1: Select Features and Preprocess the Data

Step 2: Normalize data-

Step 3: Apply the KNN Algorithm and Fit the Model

Step 4: Visualize Clusters and Centroids

Step 5: Interpret Cluster Assignments and Evaluate Results

About Dataset:

This dataset contains customer demographic and behavioral data, including Customer ID, Gender, Age, Annual Income (in thousands), and a Spending Score from 1 to 100.

Code With Output:

```
import numpy as np
import pandas as pd
df=pd.read csv(r'D:\REC 2nd Year\Data Science\Data Sets\Iris KNN.csv')
df.info()
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 150 entries, 0 to 149
Data columns (total 5 columns):

```

Result:

Thus python program to understand KNN algorithm for dataset is conducted successfully
